

Mobile payments and digital provisioning

Offer faster, more secure, and contactless payments to your participants.

Take advantage of contactless payments

Mobile payments = contactless! It's the future of payments, and it means less germs, faster (and more secure) purchases, and a better user experience for participants. Digital provisioning of cards eliminates the need for physical plastic and puts the power of benefits into your participants' hands faster than ever before.

Add their benefits debit card to their mobile wallet

Whether your participant uses Google Pay, Apple Pay, or Samsung Pay, they can quickly add their benefits debit card to their mobile wallet with just a few taps on their device.

Access their benefits debit card via mobile wallet to pay for eligible expenses

With mobile payments, participants don't need to use (or even bring) their benefits debit card when they want to pay for eligible expenses. Their card will be accessible (alongside the rest of their credit or debit cards) in their mobile wallet.

Faster, more secure, and contactless = better user experience for your participants

With mobile payments, you can make sure your participant has the option to add their benefits debit card to their mobile wallet so they can easily use it to pay for an eligible expense or take advantage of their commuter or parking benefits even when they are on-the-go.
